

Mr. Shubert Supply List 2018-2019

All Courses

1. Your choice for paper, loose-leaf or composition books. 3 ring binders are good for organization purposes but composition notebooks are fine as well.
2. TI-83 or TI-84 calculator. Inspire is acceptable so long as it isn't a "CAS".
3. Pencils and a highlighter.
4. Pre-Calculus students: Box of Clorox/Lysol wipes. Calculus and AP Calculus students: Box of Kleenex.

AP Calculus Students

I have attached a review of Pre-Calculus problems to be completed by the first day of class. While this review isn't everything you need to know for the course, it will get your mind prepared to think mathematically for the first day. My suggestion is to start working on it 7-10 days before school starts and work a little each day. Waiting to the last day will make it seem like punishment and doing it all two weeks before class will defeat the purpose since you will more than likely forget most of it during that time.
